

Phylogenetic GLS (BM + human mu): Corpus geniculatum laterale vs Rest of Brain

$$\log_{10}(\text{Corpus geniculatum laterale volume}) = -1.707 + 0.708 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Amygdala vs Rest of Brain

$$\log_{10}(\text{Amygdala volume}) = -0.602 + 0.637 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Pallidum vs Rest of Brain

$$\log_{10}(\text{Pallidum volume}) = -1.904 + 0.988 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex white vs Rest of Brain

$$\log_{10}(\text{Neocortex white volume}) = -1.611 + 1.280 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Insular cortex (grey) vs Rest of Brain

$$\log_{10}(\text{Insular cortex (grey) volume}) = -3.094 + 1.084 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus subthalamic Luysi vs Rest of Brain

$$\log_{10}(\text{Nucleus subthalamic Luysi volume}) = -3.499 + 1.013 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Capsula interna vs Rest of Brain

$$\log_{10}(\text{Capsula interna volume}) = -2.410 + 1.019 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Striatum vs Rest of Brain

$$\log_{10}(\text{Striatum volume}) = -1.388 + 0.931 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Area striata grey vs Rest of Brain

$$\log_{10}(\text{Area striata grey volume}) = -0.601 + 0.758 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex grey vs Rest of Brain

$$\log_{10}(\text{Neocortex grey volume}) = 0.910 + 0.871 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Mesencephalon vs Rest of Brain

$$\log_{10}(\text{Mesencephalon volume}) = -0.536 + 0.669 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Cerebellum vs Rest of Brain

$$\log_{10}(\text{Cerebellum volume}) = -1.451 + 1.035 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Hippocampus vs Rest of Brain

Phylogenetic GLS (BM + human mu): Nucleus dentatus cerebelli vs Rest of Brain

$$\log_{10}(\text{Nucleus dentatus cerebelli volume}) = -3.580 + 1.060 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.
