

Phylogenetic GLS (BM + human mu): Corpus geniculatum laterale vs Rest of Brain

$$\log_{10}(\text{Corpus geniculatum laterale volume}) = -1.460 + 0.720 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Amygdala vs Rest of Brain

$$\log_{10}(\text{Amygdala volume}) = -0.696 + 0.692 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Pallidum vs Rest of Brain

$$\log_{10}(\text{Pallidum volume}) = -2.193 + 1.044 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex white vs Rest of Brain

$$\log_{10}(\text{Neocortex white volume}) = -2.488 + 1.374 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Insular cortex (grey) vs Rest of Brain

$$\log_{10}(\text{Insular cortex (grey) volume}) = -3.029 + 1.085 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus subthalamic Luysi vs Rest of Brain

$$\log_{10}(\text{Nucleus subthalamic Luysi volume}) = -3.573 + 1.062 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Capsula interna vs Rest of Brain

$$\log_{10}(\text{Capsula interna volume}) = -2.453 + 1.075 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Striatum vs Rest of Brain

$$\log_{10}(\text{Striatum volume}) = -1.301 + 0.978 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Area striata grey vs Rest of Brain

$$\log_{10}(\text{Area striata grey volume}) = -0.444 + 0.770 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex grey vs Rest of Brain

$$\log_{10}(\text{Neocortex grey volume}) = 0.249 + 0.925 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Mesencephalon vs Rest of Brain

$$\log_{10}(\text{Mesencephalon volume}) = -0.358 + 0.699 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Cerebellum vs Rest of Brain

$$\log_{10}(\text{Cerebellum volume}) = -1.042 + 1.027 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Hippocampus vs Rest of Brain

$$\log_{10}(\text{Hippocampus volume}) = -0.487 + 0.747 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus dentatus cerebelli vs Rest of Brain

$$\log_{10}(\text{Nucleus dentatus cerebelli volume}) = -3.312 + 1.067 \cdot \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.
