

Phylogenetic GLS (BM + human mu): Corpus geniculatum laterale vs Rest of Brain

$$\log_{10}(\text{Corpus geniculatum laterale volume}) = -1.794 + 0.723 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Amygdala vs Rest of Brain

$$\log_{10}(\text{Amygdala volume}) = -0.455 + 0.700 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Pallidum vs Rest of Brain

$$\log_{10}(\text{Pallidum volume}) = -2.640 + 1.054 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex white vs Rest of Brain

$$\log_{10}(\text{Neocortex white volume}) = -2.449 + 1.385 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Insular cortex (grey) vs Rest of Brain

$$\log_{10}(\text{Insular cortex (grey) volume}) = -2.719 + 1.069 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus subthalamic Luysi vs Rest of Brain

$\log_{10}(\text{Nucleus subthalamic Luysi volume}) = -3.781 + 1.072 * \log_{10}(\text{Rest of Brain})$
Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Capsula interna vs Rest of Brain

$$\log_{10}(\text{Capsula interna volume}) = -2.657 + 1.085 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Striatum vs Rest of Brain

$$\log_{10}(\text{Striatum volume}) = -1.434 + 0.981 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Area striata grey vs Rest of Brain

$$\log_{10}(\text{Area striata grey volume}) = -0.465 + 0.766 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex grey vs Rest of Brain

$$\log_{10}(\text{Neocortex grey volume}) = 0.280 + 0.940 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Mesencephalon vs Rest of Brain

$$\log_{10}(\text{Mesencephalon volume}) = -0.508 + 0.706 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Cerebellum vs Rest of Brain

$$\log_{10}(\text{Cerebellum volume}) = -1.312 + 1.044 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Hippocampus vs Rest of Brain

$$\log_{10}(\text{Hippocampus volume}) = -0.639 + 0.755 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus dentatus cerebelli vs Rest of Brain

$$\log_{10}(\text{Nucleus dentatus cerebelli volume}) = -3.736 + 1.072 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.
