

Are the budget differences significant? (mean  $\pm$  95% CI, vs MH = 1.0)

Whole-brain budget

Whole-brain  
Neanderthal

$p = 0.54$

Whole-brain  
early H.sapiens

$p = 0.37$

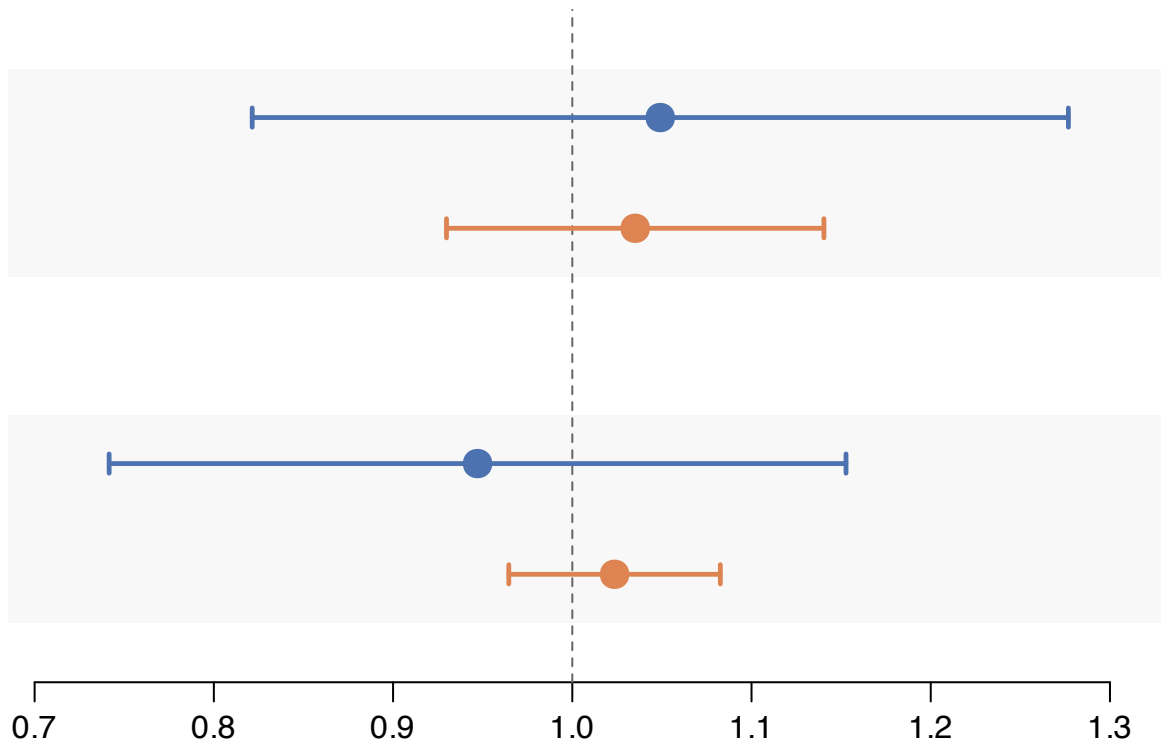

Cerebellum budget

Cerebellum  
Neanderthal

$p = 0.65$

Cerebellum  
early H.sapiens

$p = 0.49$

Energy budget (ratio to MH)

all CIs cross 1.0 -> none significant (n = 4/group)
