

Phylogenetic GLS (BM + human mu): Corpus geniculatum laterale vs Rest of Brain

$$\log_{10}(\text{Corpus geniculatum laterale volume}) = -1.906 + 0.732 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Amygdala vs Rest of Brain

$$\log_{10}(\text{Amygdala volume}) = -0.610 + 0.706 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Pallidum vs Rest of Brain

$$\log_{10}(\text{Pallidum volume}) = -2.596 + 1.063 * \log_{10}(\text{Rest of Brain})$$

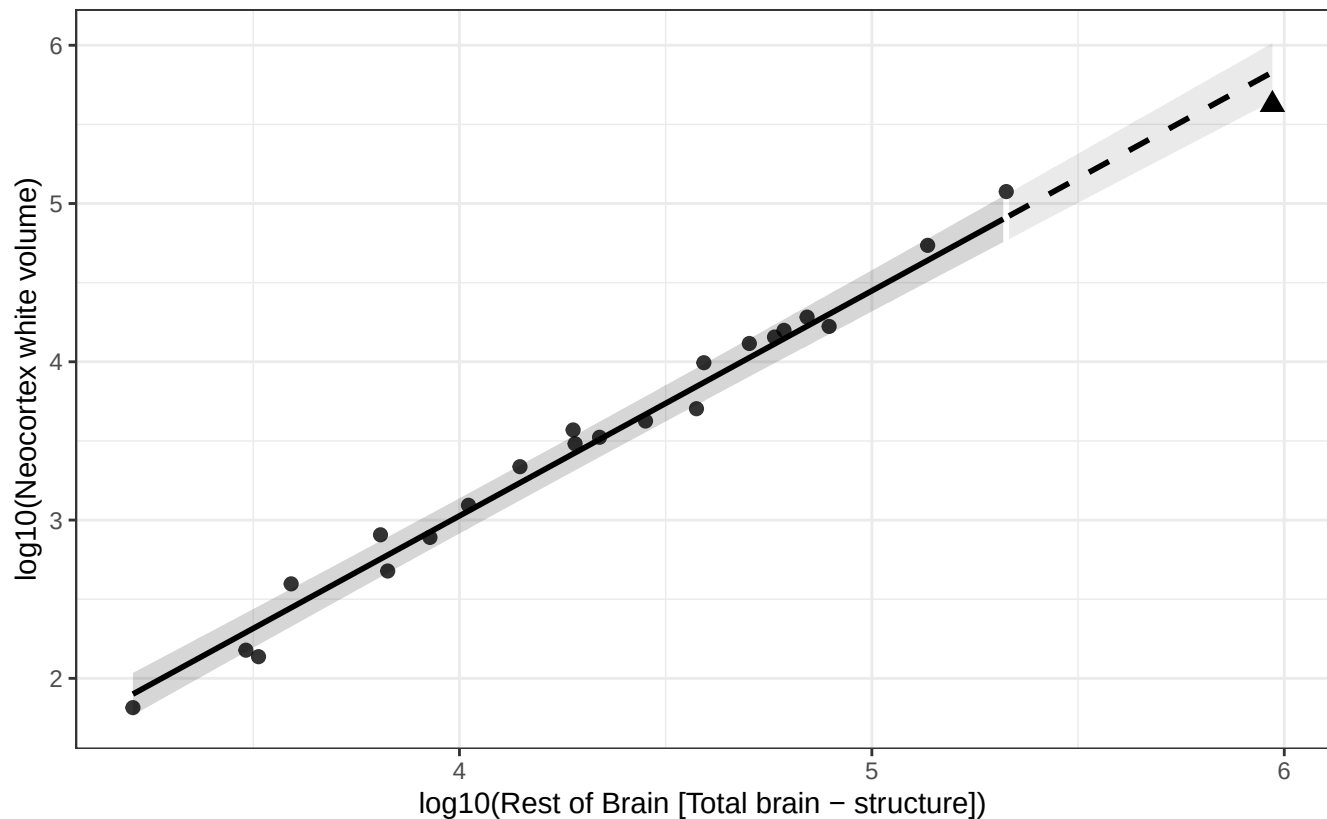

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex white vs Rest of Brain

$$\log_{10}(\text{Neocortex white volume}) = -2.662 + 1.422 * \log_{10}(\text{Rest of Brain})$$

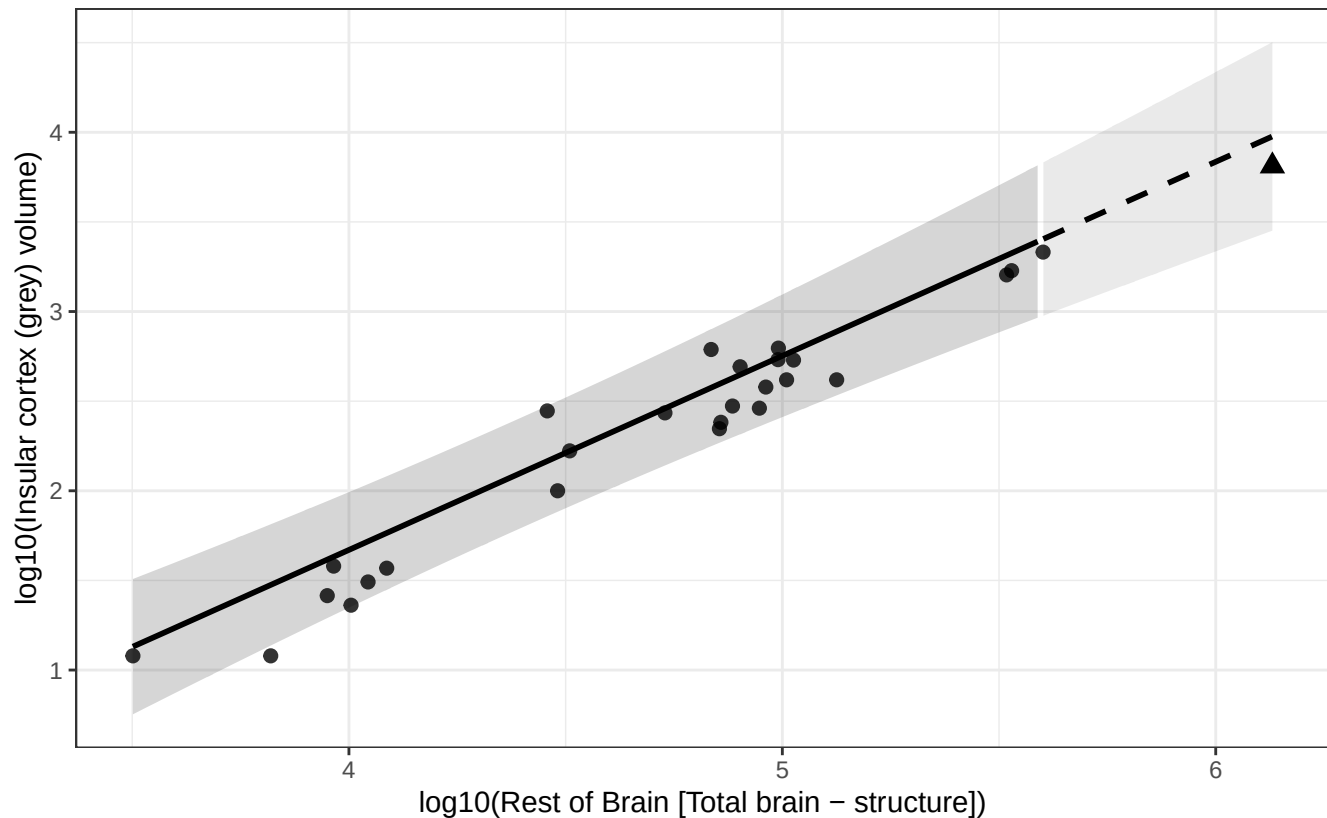

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Insular cortex (grey) vs Rest of Brain

$$\log_{10}(\text{Insular cortex (grey) volume}) = -2.660 + 1.083 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus subthalamic Luysi vs Rest of Brain

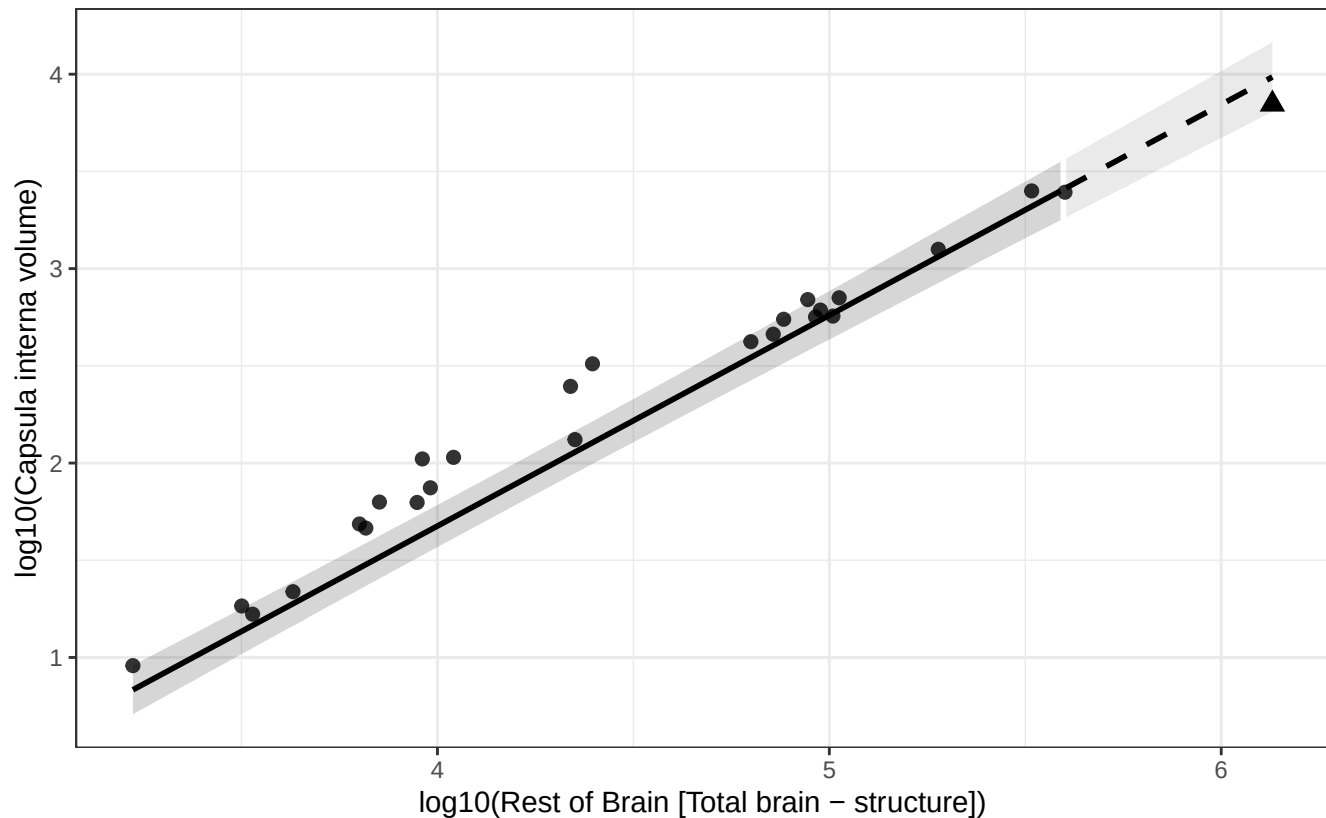

$\log_{10}(\text{Nucleus subthalamic Luysi volume}) = -3.783 + 1.072 * \log_{10}(\text{Rest of Brain})$
Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Capsula interna vs Rest of Brain

$$\log_{10}(\text{Capsula interna volume}) = -2.660 + 1.084 * \log_{10}(\text{Rest of Brain})$$

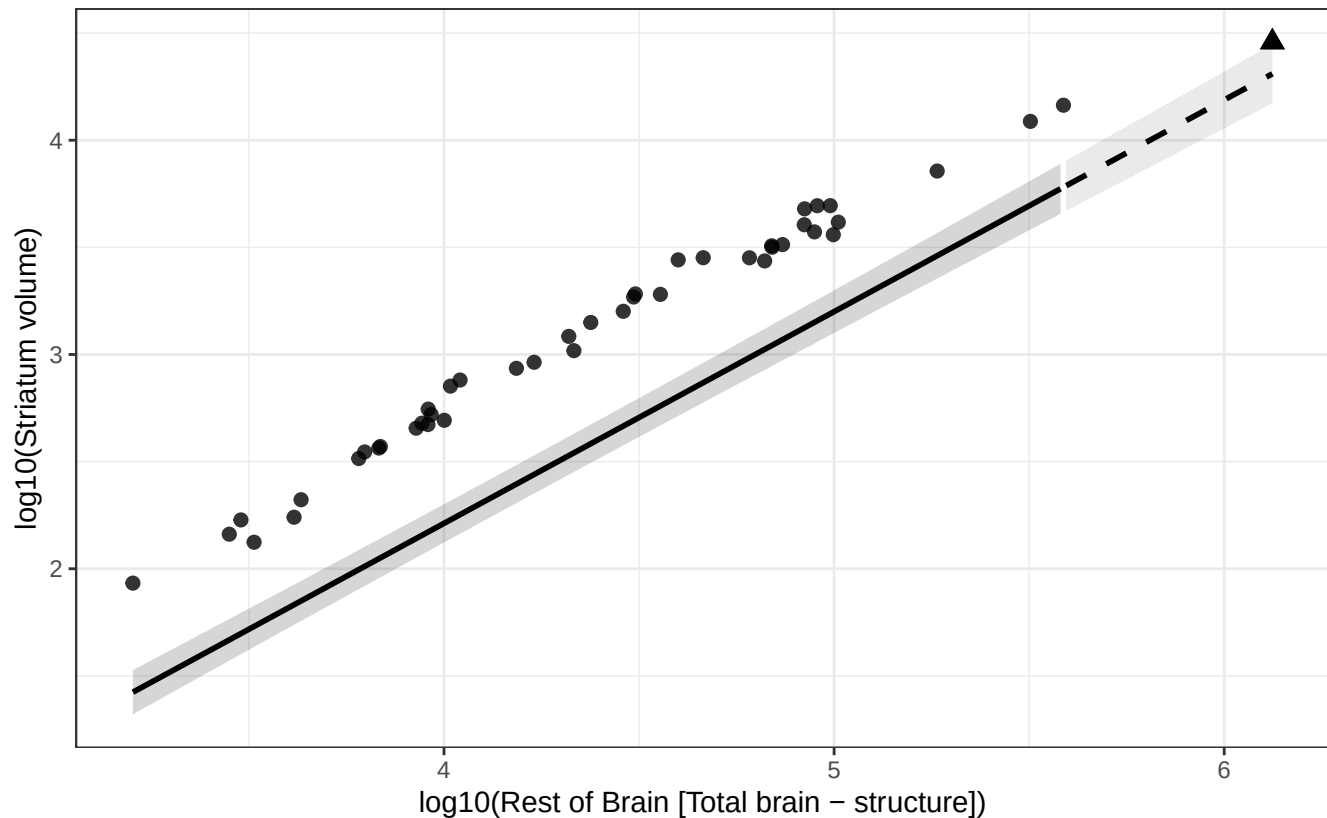

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Striatum vs Rest of Brain

$$\log_{10}(\text{Striatum volume}) = -1.740 + 0.988 * \log_{10}(\text{Rest of Brain})$$

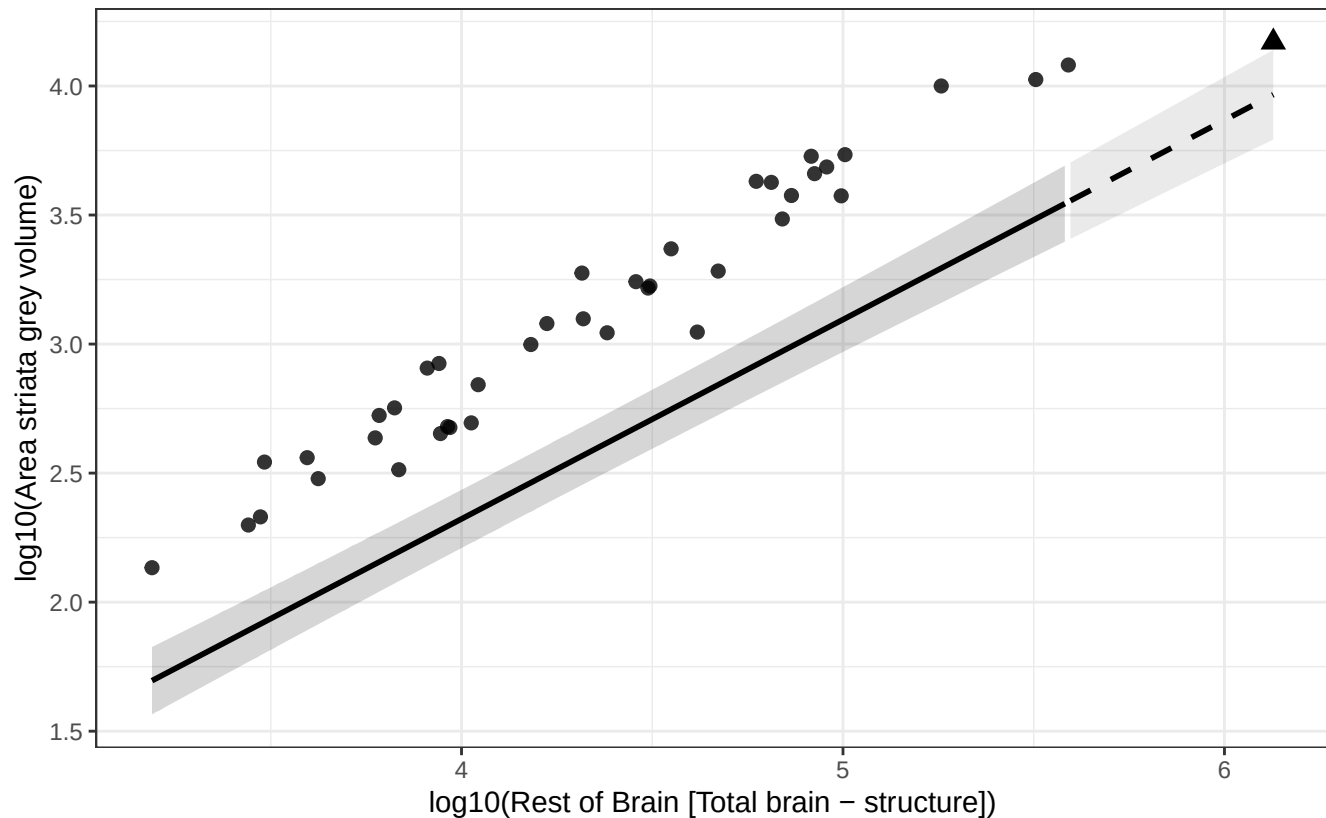

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Area striata grey vs Rest of Brain

$$\log_{10}(\text{Area striata grey volume}) = -0.767 + 0.772 * \log_{10}(\text{Rest of Brain})$$

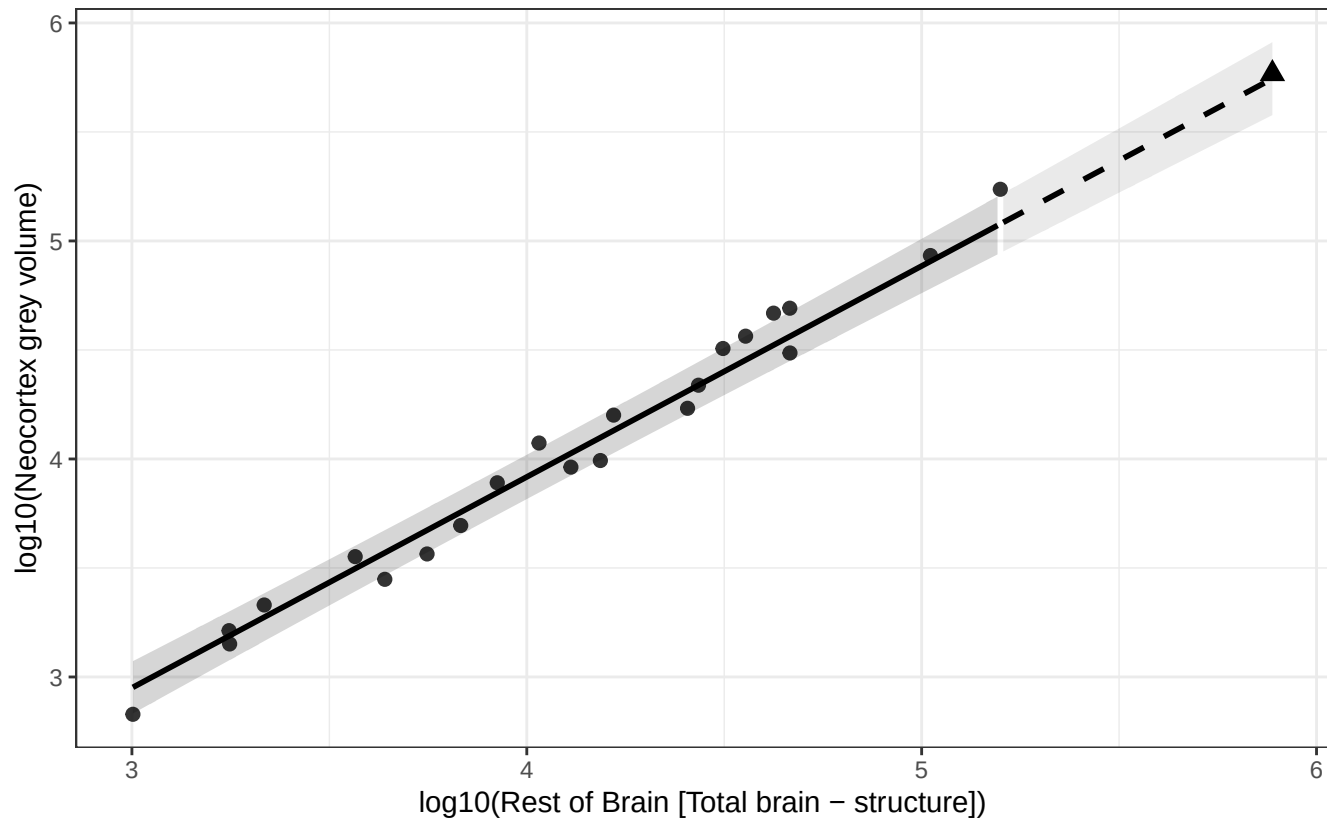

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Neocortex grey vs Rest of Brain

$$\log_{10}(\text{Neocortex grey volume}) = 0.047 + 0.968 * \log_{10}(\text{Rest of Brain})$$

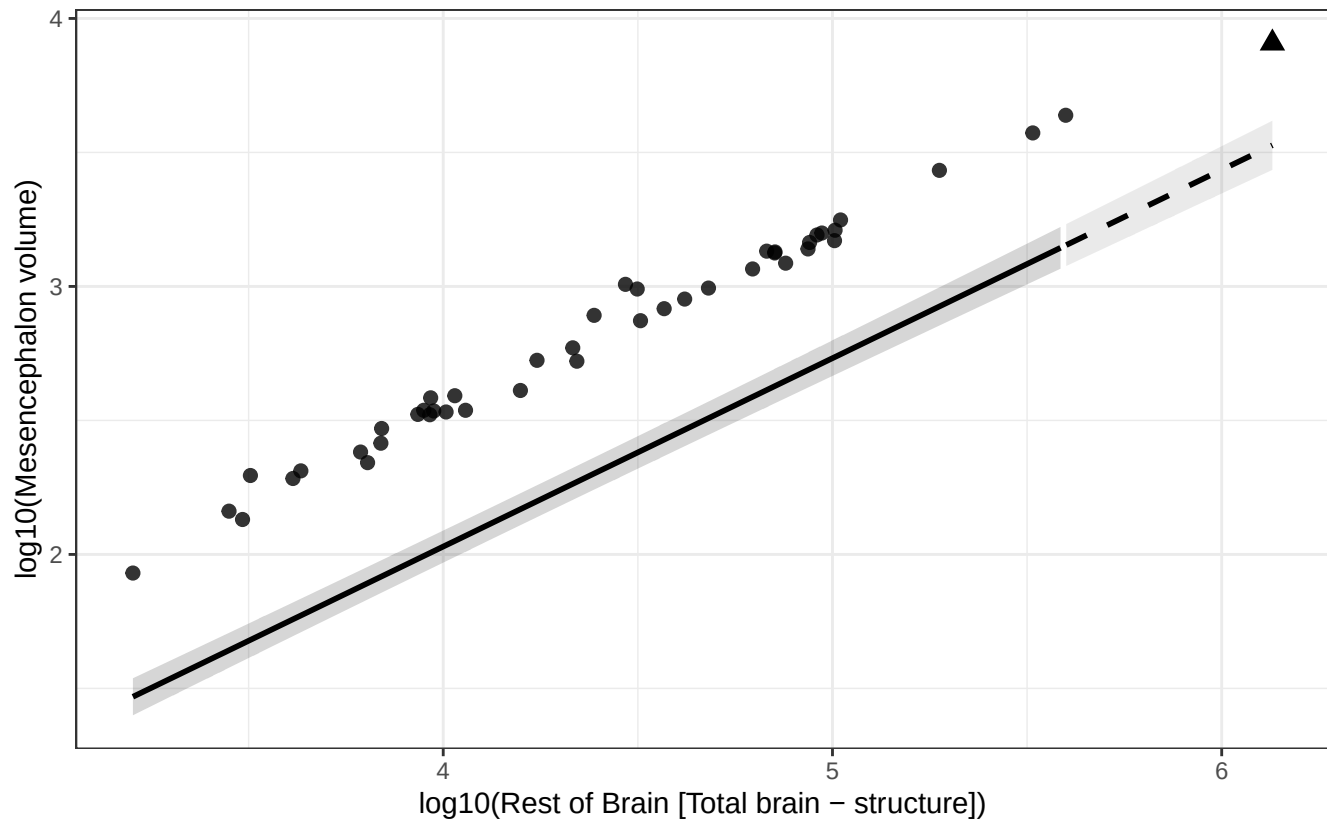

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Mesencephalon vs Rest of Brain

$$\log_{10}(\text{Mesencephalon volume}) = -0.783 + 0.703 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Cerebellum vs Rest of Brain

$$\log_{10}(\text{Cerebellum volume}) = -1.498 + 1.040 * \log_{10}(\text{Rest of Brain})$$

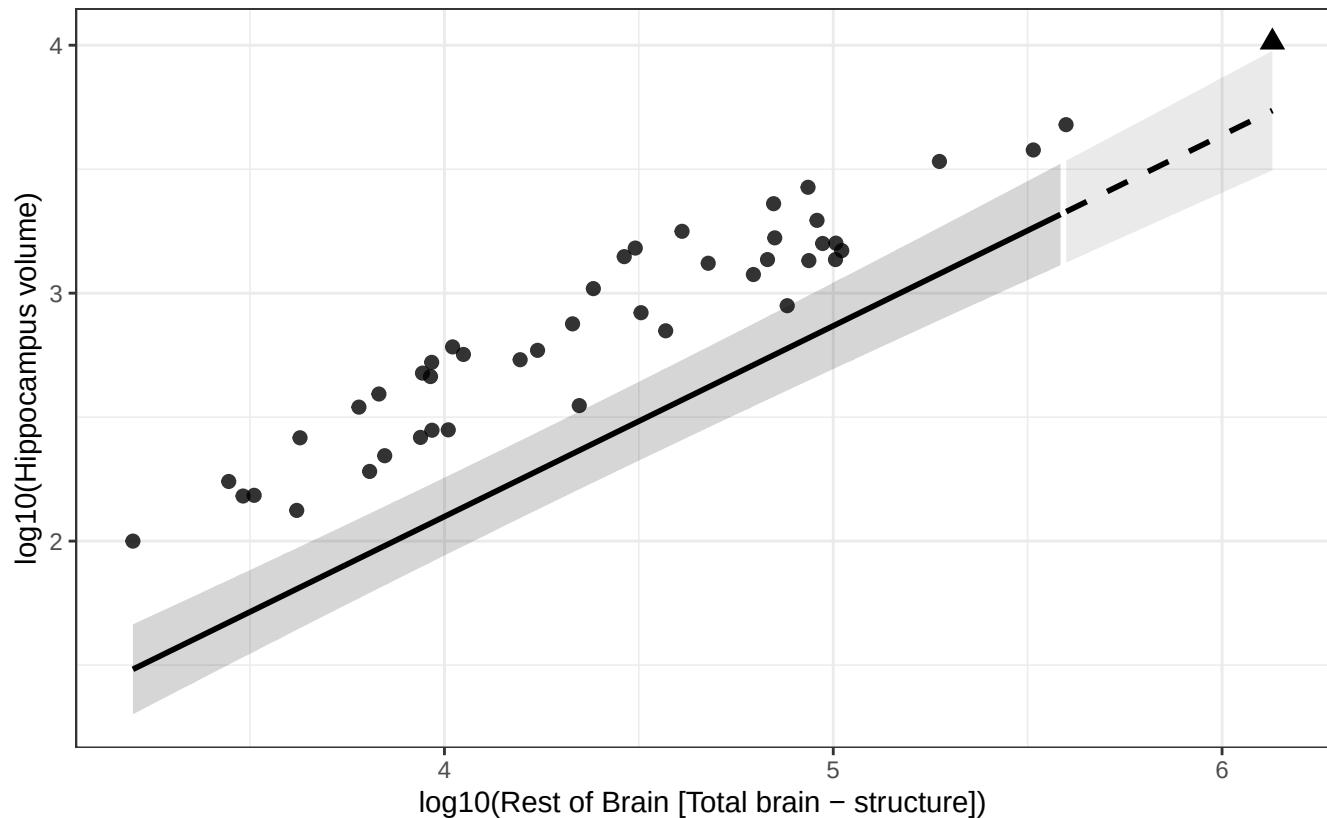

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Hippocampus vs Rest of Brain

$$\log_{10}(\text{Hippocampus volume}) = -0.977 + 0.769 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.

Phylogenetic GLS (BM + human mu): Nucleus dentatus cerebelli vs Rest of Brain

$$\log_{10}(\text{Nucleus dentatus cerebelli volume}) = -3.751 + 1.075 * \log_{10}(\text{Rest of Brain})$$

Human = triangle; fit excludes human; dashed line = extrapolated segment.
